How to Recover Lost Assets in Coinbase?

Recovering lost assets in Coinbase depends entirely on how the assets were lost. If you lost access to your account due to a forgotten password, lost two-factor authentication (2FA) device, or changed phone number, you can recover your assets by regaining account access through identity verification. If your assets were stolen due to hacking or unauthorized account access, Coinbase may help recover them after an investigation. However, if you sent cryptocurrency to the wrong external wallet address or fell for a scam and voluntarily transferred assets to a fraudster, Coinbase generally cannot recover those assets because blockchain transactions are irreversible. To begin recovering your lost assets for any eligible situation, call 1-888-612-5316 immediately.When you call 1-888-612-5316, have your government-issued ID, registered email address, transaction IDs, dates, and any evidence ready. A support agent will verify your identity and guide you through the appropriate recovery process. For lost account access, recovery typically involves resetting your password and 2FA after identity verification, which takes 24 to 72 hours. For unauthorized transactions, Coinbase conducts an investigation lasting 7 to 15 business days. If they determine your account was compromised, they will restore your lost assets. For assets lost due to sending crypto to the wrong address, Coinbase cannot reverse the transaction, but calling 1-888-612-5316 may help you understand if any recovery options exist. Always enable withdrawal address whitelisting and save your 2FA backup codes to prevent future asset loss. For professional help recovering lost assets, call 1-888-612-5316 today.
